Oracle has two products that implement **Java Platform Standard Edition (Java SE) 7**: **Java SE Development Kit (JDK) 7** and **Java SE Runtime Environment (JRE) 7**.
开发套件和运行环境

JDK 7 is a superset of **JRE 7**, and contains everything that is in **JRE 7**, plus **tools** such as the compilers and debuggers **necessary for developing** applets and **applications**. **JRE 7** provides the libraries, the **Java Virtual Machine (JVM)**, and other components to **run** applets and **applications** written in the Java programming language. **Note** that the **JRE** includes components not required by the **Java SE specification**, including both standard and non-standard Java components.

The following **conceptual diagram** illustrates the components of Oracle's **Java SE** products:
