Using the Generated Objects

MyBatis Generator (MBG) generates these types of objects:

1. Java Model Objects (always)
2. SQL Map Files (always for iBATIS, usually for MyBatis)
3. Java Client Objects (optional)
4. A class for use in the xxxByExample methods. See the following pages for information about that class:
   - Example Class Usage Notes
   - Extending the Example Classes

1. 模型对象（Bean）
2. SQL 映射文件
3. 客户端对象（DAO 接口）

使用xxxByExample方法的示例类：
1. 示例类用法说明
2. 扩展示例类

The individual pages describe these objects, and their usage.
